1. This report contains indications relating to the following items:

- [X] I: Basis of the report
- [X] II: Priority
- [X] V: Reasoned statement under Rule 43bis.1 (a) (I) as to novelty, inventive step and industrial applicability; citations and explanations in support of this statement.

Page 007:

II: Priority

[X] The following document has not yet been submitted:

[X] Copy of the earlier application has priority as claimed (Rule 43 bis.1 and 66.7 (a)).

It was therefore not possible to examine the validity of the claimed priority. Nevertheless, this report was prepared on the assumption that the claimed priority date is indeed the definitive date.

V: Reasoned Statement under Rule 43 bis.1 (a) (I) as to novelty, inventive step and industrial applicability; citations and explanations in support of this statement.

1. STATEMENT

Novelty (N) Yes: Claims 1-16

Inventive Step (IS) Yes: Claims 1-16

Industrial Applicability (IA) Yes: Claims 1-16

2. CITATIONS AND EXPLANATIONS

See appended page

V. Reasoned Statement ...

V.1 The following references are cited:

D1: DE 87 07 787 U (Friedelin THIELMANN), July 16,  
1987

D2: US Patent 4,733,050 (Gerald R. GRAFIUS), March 22,  
1988

V.2 Independent claim 1

Reference D1 is considered to be the closest prior art to the subject of claim 1. It discloses an apparatus for cleaning a gas nozzle of a welding torch and for spraying a welding wire located in the gas nozzle, from which the subject of claim 1 is distinguished in that

the spraying device is movable in the direction of a second axis, located differently from the first axis, with regard to the clamping/holding device.

The subject of claim 1 is accordingly novel (Article 33 (2) PCT).

The object to be attained by the present invention can thus be considered to be attaining a more-uniform wetting of the interior of the gas nozzle, or of the welding rod located in it, with an anti-stick medium.

The way proposed for attaining this object in claim 1

of the present application, namely disposing the nozzles movably relative to the clamping device, is not obvious from the prior art cited. Devices are indeed known in which a welding torch, guided by a robot arm, is displaced along a spraying device (see D2), but this involves various processing stations located next to one another which are approached in succession by a robot arm, rather than a device that performs the various steps in one position.

Claim 1 is accordingly based on an inventive step (Article 33 (3) PCT).

V.3 Claims 2 through 16 are dependent from claim 1 and thus likewise meet the requirements of the PCT with regard to novelty and inventive step.
